MOUNTAINS

These mountains resulted from regional uplift and warping of the rocky earth's crust an estimated sixty million years ago. Their present rugged form was fashioned by the erosion of water and Ice Age glaciers.

MORAINES

The two long parallel forested ridges below the mountains and above the meadows are moraines that were formed by rock debris deposited along the sides of a glacier during the Ice Age.

MEADOWS

The flat meadows were once the bottoms of glacial lakes dammed by moraines and later filled with silt. Today they are excellent habitat for deer and elk.

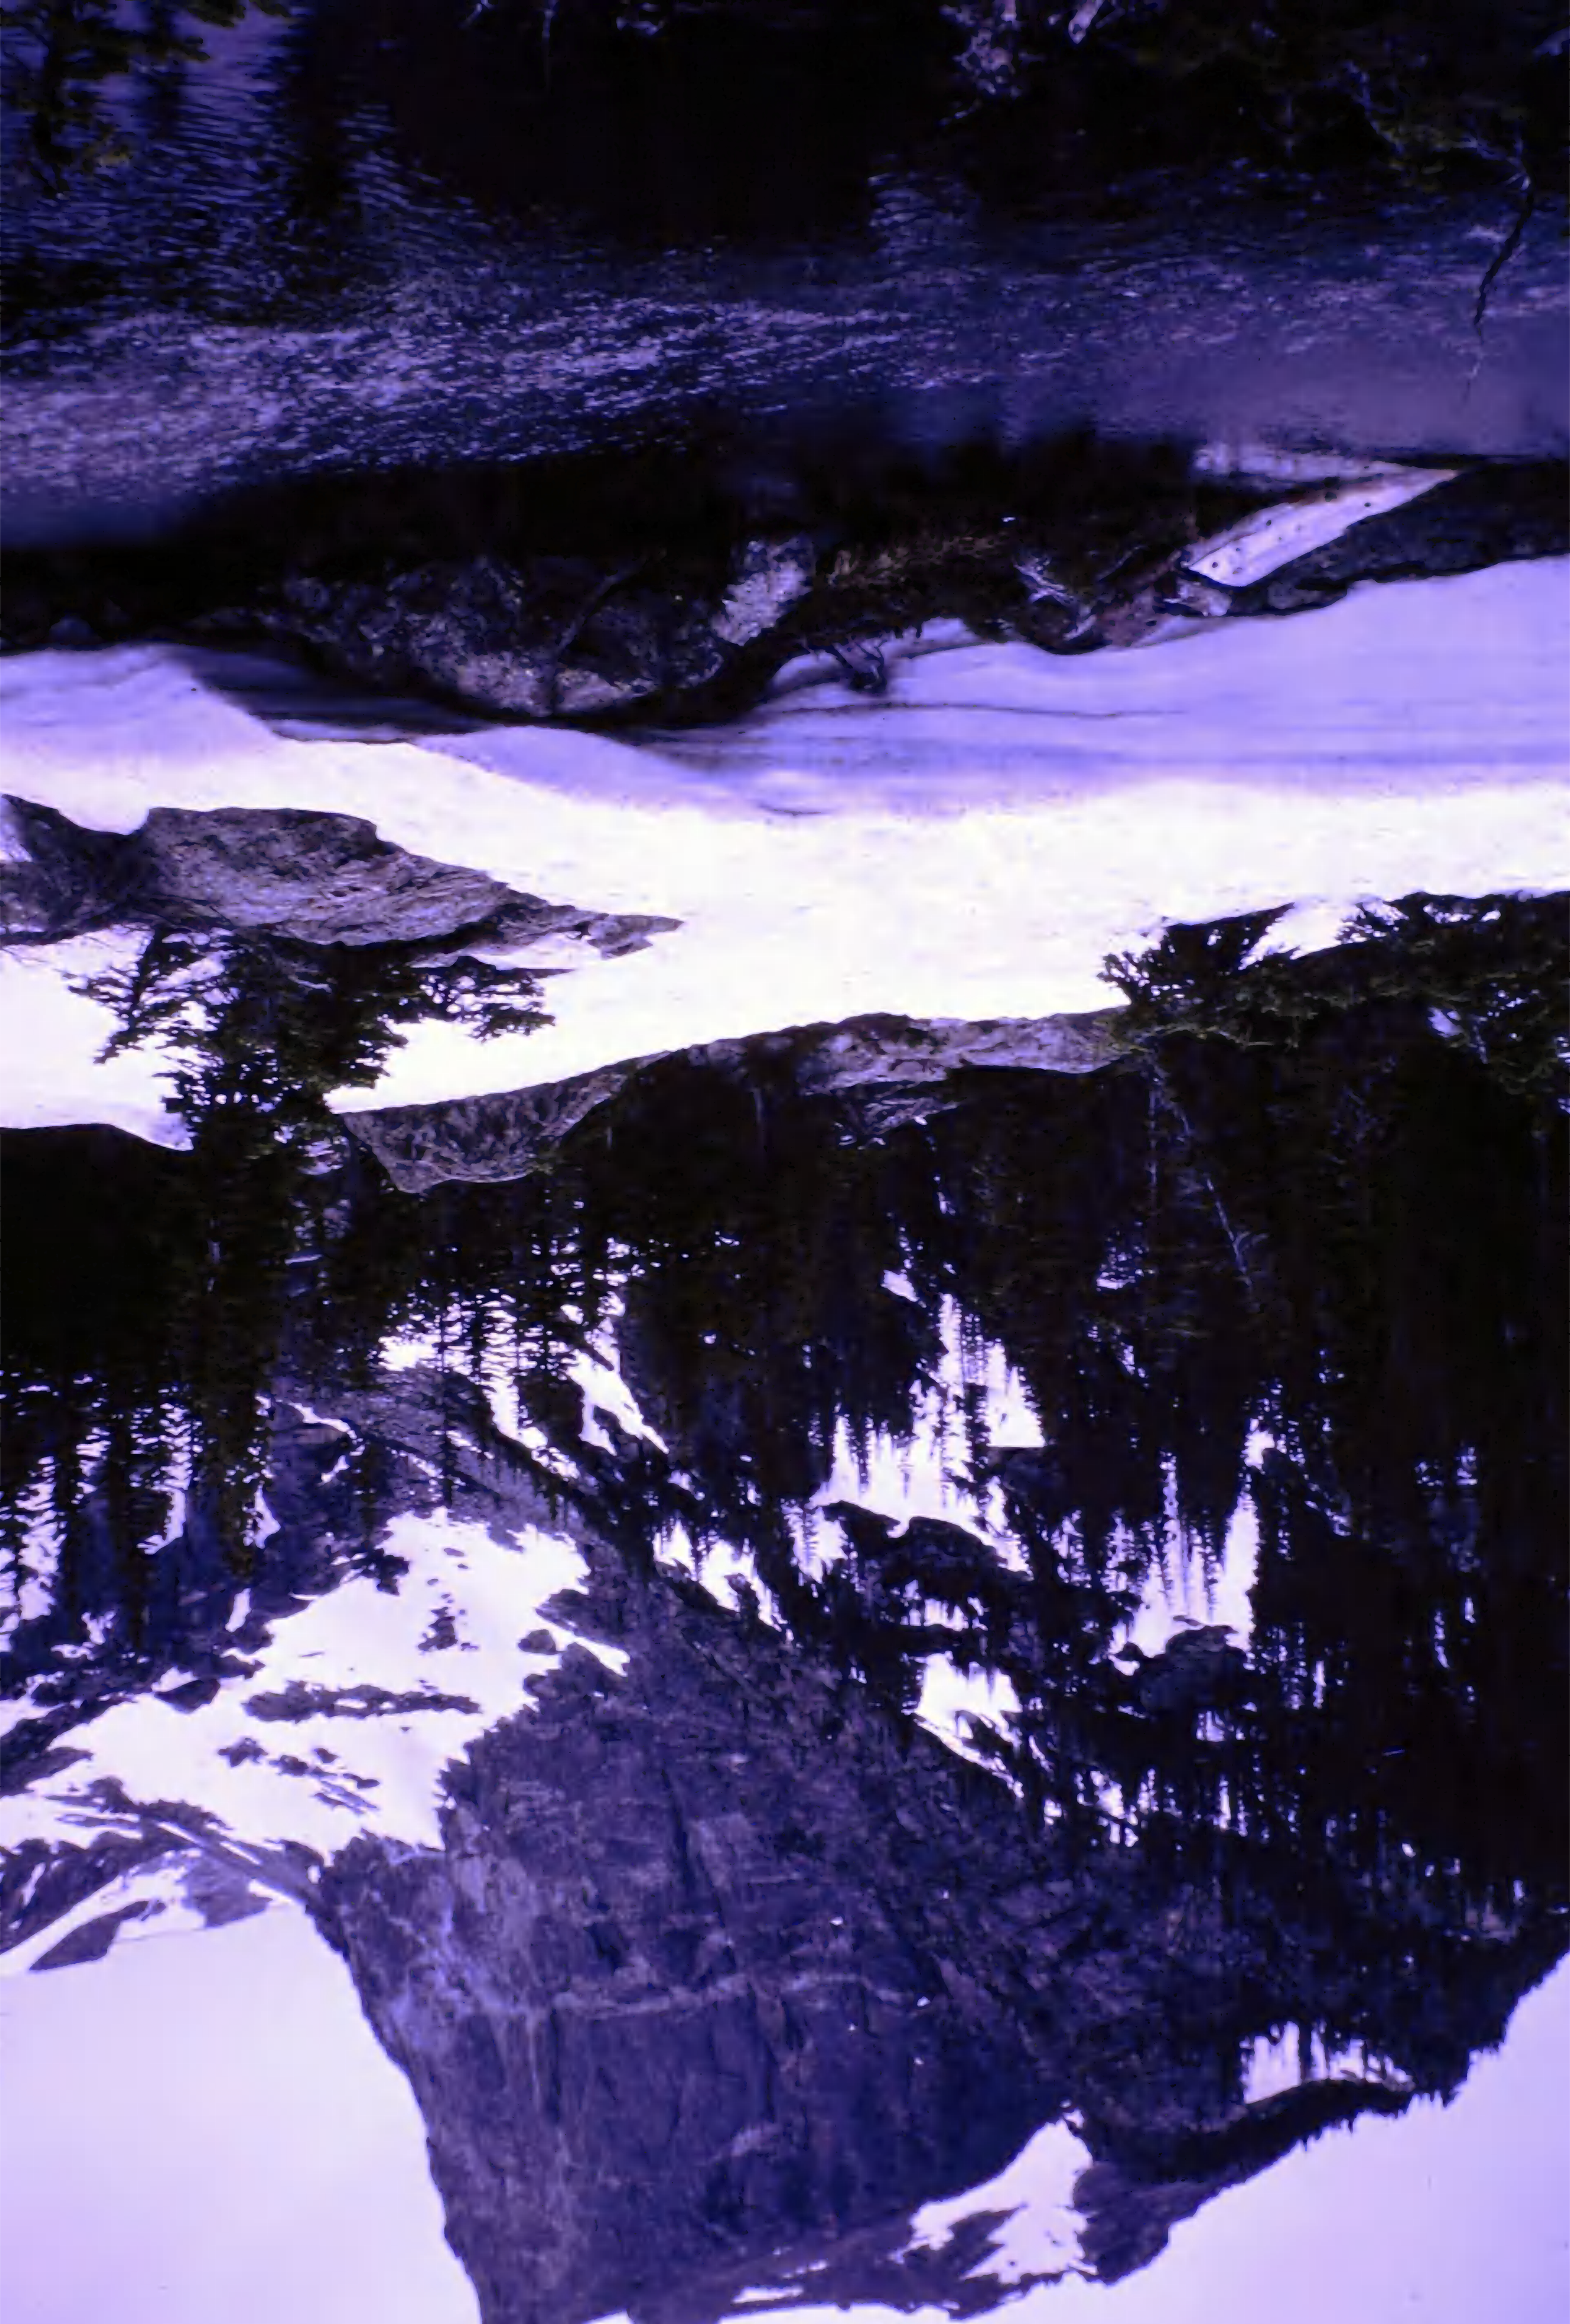

POUDRE LAKE
This lake is the source of the Cache La Poudre River, named by a party of French trappers, representing the American Fur Company. In 1836, by this river about 6 miles upstream from Ft. Collins, the trappers "cached" a portion of their gun "poudre", to hide it from the Indians. Thus the name, Cache La Poudre (Hiding place of the powder).

CONTINENTAL DIVIDE
MILNER PASS EL. 10,759

THE "GREAT DIVIDE" SEPARATES DRAINAGE TO THE ATLANTIC FROM DRAINAGE TO THE PACIFIC. IT TRAVERSES AMERICA FROM ALASKA ALMOST TO CAPE HORN.

← ATLANTIC OCEAN DRAINAGE

CACHE LA POUDRE CREEK DRAINS INTO THE PLATTE RIVER WHICH JOINS THE MISSOURI, THENCE TO THE MISSISSIPPI, THUS REACHING THE GULF OF MEXICO (PART OF THE ATLANTIC OCEAN).

PACIFIC OCEAN DRAINAGE →

BEAVER CREEK DRAINS INTO THE COLORADO RIVER WHICH FLOWS THROUGH GRAND CANYON NATIONAL PARK AND INTO THE GULF OF CALIFORNIA (PART OF THE PACIFIC OCEAN).
